

THERMOPLASTIC COMPOSITION PROVIDING A LOW GLOSS, TEXTURED
SURFACE, AND METHOD

ABSTRACT OF THE DISCLOSURE

[0053] The present invention relates to a thermoplastic composition comprising (i) at least one polycarbonate; (ii) at least one polyester; and (iii) at least one rubber modified thermoplastic resin; wherein a molded article comprising the composition exhibits a heat deflection temperature of at least 85°C as measured at 1.8 MPa according to ISO 75, and a gloss value of less than or equal to about 3 as measured at an angle of 60°, wherein the said composition is molded using a textured mold at a mold temperature of greater than about 58°C. Articles made from the composition and a method for preparing the composition are also provided.
